

APPROVED SOIL AMENDMENTS

New lawns require special attention to thrive in our semi-arid climate. To promote your goal of a beautiful landscape while watering wisely, we recommend these approved soil amendments. They help your lawn retain water and promote healthy growth. Soil amendments should mix into the top 6" of the soil to save 25% of the required moisture. Please **provide a receipt** of the approved amendment purchased showing **4 cubic yards per 1,000 square feet** with your establishment permit application.

For an exception to the soil amendment requirement or for special consideration of an unlisted soil amendment, please submit the soil test results provided by a [professional soil laboratory](#).

C&C Sand and Stone

- Aged Humus
- Brew-Gro (Biocomp)-Class I
- Composted Cow Manure

- TRR Humas Compost

ACONDICIONAMIENTOS DE SUELO APROBADOS

Los céspedes nuevos requieren una atención especial para desarrollarse en nuestro clima semiárido. Para conseguir su objetivo de tener un jardín bonito y, al mismo tiempo, regar con prudencia, recomendamos estos acondicionamientos de suelo aprobados. Ayudan a su césped a retener agua y promover un crecimiento saludable. Los acondicionamientos de suelo deben mezclarse en las 6 pulgadas superiores del suelo para ahorrar un 25 % de la humedad requerida. **Proporcione un recibo** del acondicionamiento aprobado que se adquirió que muestre **4 yardas cúbicas por 1,000 pies cuadrados** con su solicitud de permiso de establecimiento.

Para obtener una excepción al requisito de acondicionamiento de suelo o para la consideración especial de un acondicionamiento de suelo no incluido en la lista, envíe los resultados de las pruebas de suelo proporcionados por un [laboratorio de suelos profesional](#).
